

PROJECT ECHO: BEST DATA PRACTICES

Dee's Intersectionality Case

Prepared for: Dee

Prepared by: Adalida

February 28, 2020

SUMMARY

Problem

Need a way to represent intersections of (possibly in one graph):

Sets:

A -> Gender Minority

B -> IV Drug Use

C -> Unstable housing

Set Intersections:

$A \cap B$

$B \cap C$

$A \cap C$

$A \cap B \cap C$

Goals

Represent intersectionality of sets such that its visually appealing and informative. Visually appealing: text fits, color, easy to read, can represent the data better, intersections are proportionally representative of sets.

Solution

Use an Upset Graph which can visualize the intersectionality for as many sets as needed. Solution found from: <https://bmcbioinformatics.biomedcentral.com/articles/10.1186/s12859-017-1708-7>. It will look like this: <http://vcg.github.io/upset/>. It takes a JSON file upload with the correct data set. This solution lays out the data in a variety of interactive graphs.

Project Notes:

- Map is interactive
 - Should be hosted on a web server because it's currently hosted on Adalida's computer.
 - Abbreviations
 - I : Largest Intersection
 - S: Largest Set
 - A: Largest Aggregate Set
 - U: Universal Set
-
